

ABS RUSTICATION STRIPS

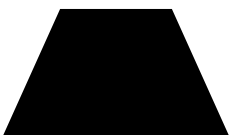

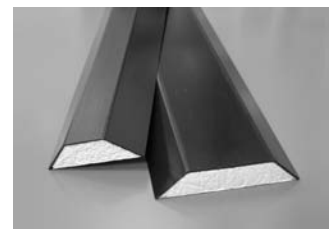

Rustication Strips are used to create an architectural detail in concrete. Greenstreak offers a variety of materials for particular applications and the number of reuses desired. Our standard Rustication Strips are manufactured from ABS, a rigid and durable plastic for non-radius applications and moderate reuse requirements.

ABS Rustication Strips can be easily nailed to wood forms and nailed or screwed to wooden dowels for Tilt-Up applications.

STANDARD ABS SIZES:

Greenstreak's newest entry in this category is the superior performing **REVEAL STIX**, a composite of foam and plastic. **REVEAL STIX** are easy to install and cost competitive with wood reveals, yet offers an incredibly smooth and uniform finish. See the **REVEAL STIX** catalog for complete information.

Flexible Reveal Strips are available in Elastomeric materials. Flexible Reveal Strips are for radius or non-radius, high reuse applications. Please see the Flexible Reveal Strips flyer or call for additional information.
