RE: Laser Form Products

I would like to take this opportunity to thank you for sending the CD that showed how your Laser Form product works. It arrived in our office approximately two (2) weeks prior to the start of our Home Depot Project in Edwardsville, Illinois. After viewing the CD I was immediately *interested* and needed more information. I called Greenstreak to get pricing and delivery information, and they referred me to my local construction supplier, Ersco, in Fairview Heights, IL. I contacted my sales person, Joe Harrington, and was quite pleased with the cost of the "Laser Form"; however, it was the cost of the "stakes" that concerned me. I wasn't sure that I could justify the total cost (both the Laser form and the stakes) per lineal foot. When Joe assured me that the stakes could be re-used, this convinced me to give it a try. After the first day of setting-up, I could see the advantage and the cost-effectiveness. We set-up a 30,000 square foot pour in *one-third* of the time that it would normally take. The cost savings right there was enough to convince me that I wanted to use the Laser Form for each and every pour. And then when I saw the many other advantages such as: the ability to Laser Screed over the form; making construction joints quicker and flatter; being able to "head-off" an area in very little time, I knew I had made the right decision for my company.

I am very pleased with the Laser Form product and would highly recommend it to any company that uses a Laser Screed and is interested in *saving money* and *boosting* profits.

Thanks, again, for showing me how to save time and increase profitability.
